Abdulkader Shanbour

Software Engineer | Frontend Developer (React.js / Next.js)
Damascus, Syria | +963 993 505 919 | abd.alkader.shanbour@gmail.com
Portfolio | LinkedIn | GitHub

Professional Summary

Software Engineer specialized in **React.js** and **Next.js**, with a strong focus on **System Architecture** and **Performance Optimization**. Proven track record in building scalable, production-grade applications using **Domain-Driven UI** and **Clean Architecture**. Expert in **DevOps-aware deployment** (Nginx, Docker) and transforming low-performance systems into high-speed, secure platforms.

Experience

Frontend Developer – CloudTech Company
June 2025 – Present

- **Performance Engineering:** Optimized the "Al-Fateh" application system, increasing performance scores from **71% to 90%+** through advanced profiling and rendering strategies.
- **Dynamic Systems:** Engineered a fully dynamic application engine allowing real-time modification of input fields, UI cards, and multi-language content via an administrative dashboard.
- **Security & Scalability:** Implemented frontend security layers, including **Rate Limiting** and **DOS protection** awareness, while managing high-traffic production environments.
- **Dashboards:** Developed secure self-service portals for telecom providers (GalaxyNet, OmniSmartStar) with real-time WebSocket traffic monitoring and billing integration.
- **DevOps Integration:** Automated deployment workflows using **Nginx (Reverse Proxy)**, SSL management, and Docker containers for production stability

Frontend Developer – React.js / Next.js (Freelance / Product Work)
March 2023 – Present

- **Architectural Patterns:** Designed complex dashboards using **Facade** and **Observer** patterns to ensure decoupled, extensible, and testable business logic.
- **Complex State Management:** Built high-performance UIs for banking and management systems using **Redux Toolkit** and **Context API** to handle multi-level account hierarchies.

- **Security-First Development:** Integrated **OTP verification** and **Role-Based Access Control (RBAC)** in citizen-facing government platforms.

Key Projects

Al-Fateh Application System (Live)

- **Role:** Lead Frontend Developer.
- **Impact:** A secure, dynamic portal for high-volume applications. Implemented a data-driven UI where all content is dynamically fetched and rendered based on admin configurations.
- **Tech:** Next.js, Rate Limiting, Multi-language Support, Performance Profiling.

Medily HR – Hospital Management System *(April 2025 – Present)*

- Enterprise HR system for a government hospital (~900 employees), deployed on-premise.
- Designed and implemented role-based dashboards for administrative staff, department managers, and executive management.
- Refactored a monolithic route-based UI configuration into a domain-driven, modular metadata system using a Facade-based registry approach, improving maintainability and scalability.
- Built attendance tracking, salary calculation logic, leave management, and KPI-driven dashboards.
- Focused on system usability, data clarity, and decision-oriented UI rather than CRUD-based screens.
- Collaborated with backend (NestJS + SQL Server) on data modeling, permissions, and workflows

Aoun Therapy – Mental Health AI Chatbot (LLM-Based) – 2026 (Live)
[https://aoun-therapy-mental-health.up.railway.app/**]**

• Designed and developed an AI-powered mental health assistant using a Large Language Model (LLM) integrated through a FastAPI backend.
• Engineered structured prompt and context injection mechanisms to guide model responses toward empathetic and supportive mental health conversations.

• Implemented conversation context management allowing the chatbot to adapt responses based on dialogue history and user emotional cues.
• Built a scalable REST API architecture with FastAPI enabling AI interaction, response processing, and future model integration.
• Focused on responsible AI interaction, preventing harmful responses and encouraging healthy coping strategies and professional support when needed.
• Deployed the system on a cloud environment (Railway) with production-ready API endpoints.

Tech: Python, FastAPI, LLM APIs, Prompt Engineering, Context Management, REST API, Cloud Deployment

GalaxyNet ISP – Self-Care Platform (2026)
Live: galaxynet + client.galaxynet.sy

- Telecom customer self-service platform integrated with billing, usage, and account control.
- Next.js (SSR), Tailwind CSS, secure routing, API integration, live account data, domain logic.
- Deployed via Nginx reverse proxy + SSL + Docker

OmniSmartStar ISP – Self-Care Platform (2025)
Live: omnismartstar.sy + selfcare.omni.cloudtech-it.com

- Full ISP client portal with service management, recharging, and authentication.
- Telecom customer self-service platform integrated with billing, usage, and account control.
- Next.js (SSR), Tailwind CSS, secure routing, API integration, live account data,

DashNet – Company Profile (2025)
Live: dashnet.sy

- company profile (SEO).

Banking Account Management Dashboard (freelance)

- **Architecture:** Applied **Facade Pattern** to simplify complex banking subsystems (Savings, Loans, Investments) and **Observer Pattern** for real-time account activity notifications.
- **Features:** Managed account state transitions (Active, Frozen, Suspended) and implemented audit logging for 100+ concurrent transaction simulations.

Career Compass Dashboard *(May 2024 – July 2024)*

- Interactive admin dashboard with real-time charts and data visualization tools.

Submarine with Physics *(May 2024 – Aug 2024)*

- Physics-based submarine simulation game demonstrating motion and buoyancy principles.

Engineering & Software Architecture Skills

Software Engineering Principles:

- Requirement Analysis, System Design, Solution Architecture
- Modular UI Architecture + Feature-based + Domain-oriented UI
- Refactoring for readability and scalability

Design Patterns & Code Quality:

- Strategy, Facade, Observer
- Anti-pattern elimination + one source of truth

DevOps & Deployment Awareness:

- Linux (Ubuntu) / Nginx / Docker
- Reverse Proxy + SSL + Maintenance Modes
- Environment variables + secure configuration
- Production troubleshooting (502/503)
- WebSocket integration
- Security (AES128-CBC encryption)

Frontend Engineering:

- Next.js (App Router, SSR, SSG, ISR)
- React + Redux Toolkit + Context API
- UI Systems + CSS Architecture + Tailwind + custom animations
- Performance + Profiling + SEO

Software Engineering Skills

- Requirement Analysis and System Design.
- Software Project Planning and Lifecycle Management.
- Complex Problem Solving and Solution Architecture.

Technical Skills

Languages: JavaScript, TypeScript, C++, Java, PHP, SQL, HTML, CSS
Frameworks & Libraries: React, Next.js, Redux Toolkit, Three.js, Bootstrap, Tailwind
DevOps & Tools: Docker, Nginx, GitHub, GitLab, JIRA, Trello, Linux
Systems: Deployment, server config, WebSocket, reverse proxy, SSL

Education

Damascus University – B.Sc. in Information Technology (2021 – Present)
Key Courses: Data Structures, Algorithms, Software Engineering, Databases, AI Fundamentals, Network Programming, Operating Systems.

Training & Certifications

- Innova Entrepreneurship Program – MTN Syria

Languages

- Arabic: Native
- English: Intermediate
